Instructional design refers to the systematic process of translating principles of Elaboration Theory, as well as Keller's ARCS Model for motivation, Reigeluth's Elaboration Theory, 4C/ID Model, and Training Materials for COT. Research Support for COT.

The Elaboration Theory was introduced by Charles Reigeluth, an American educational theorist in 1979. The theory is central to instructional design, and it is based on the idea that content to be learned should be arranged in a way that is simpler yet more general. This approach is designed to control cognitive load in the design of complex learning environments. Reigeluth's theory has been influential in the field of educational design, and it has been used in the development of educational materials and courses.
